Overview

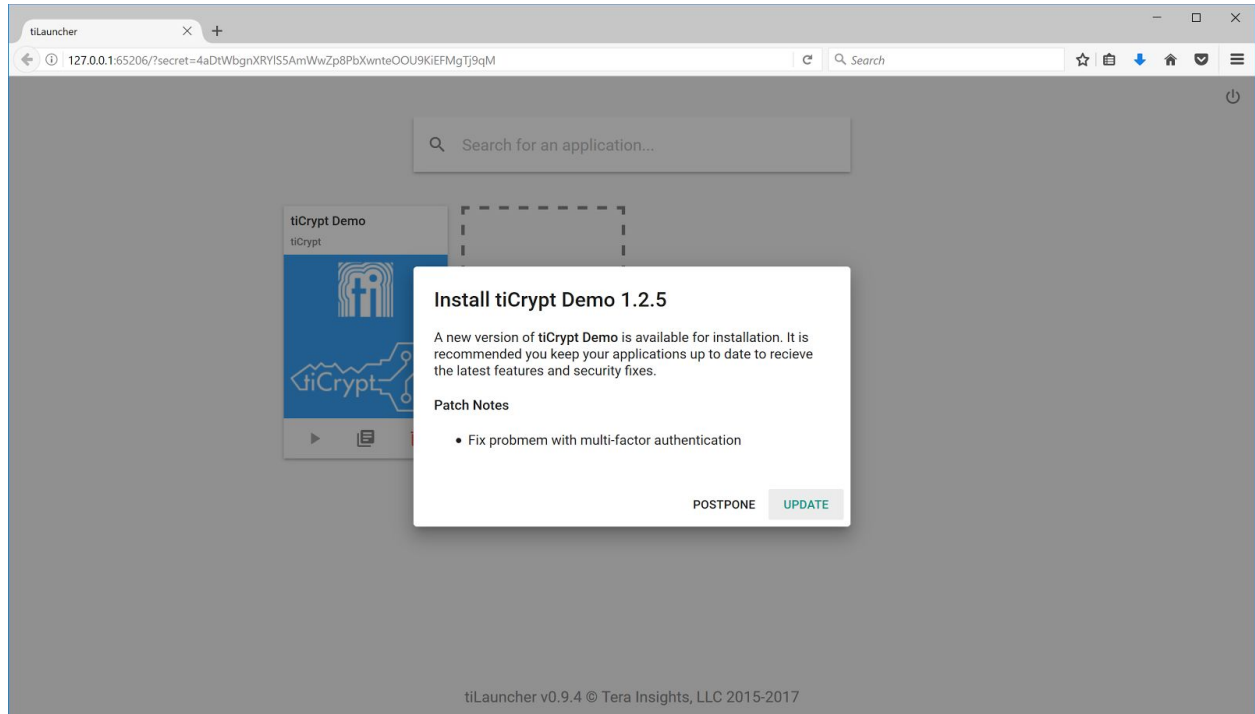

This document provides instructions on how to launch the tiCrypt application. To request access to the demo system please email thomas@terainsights.com

Instructions

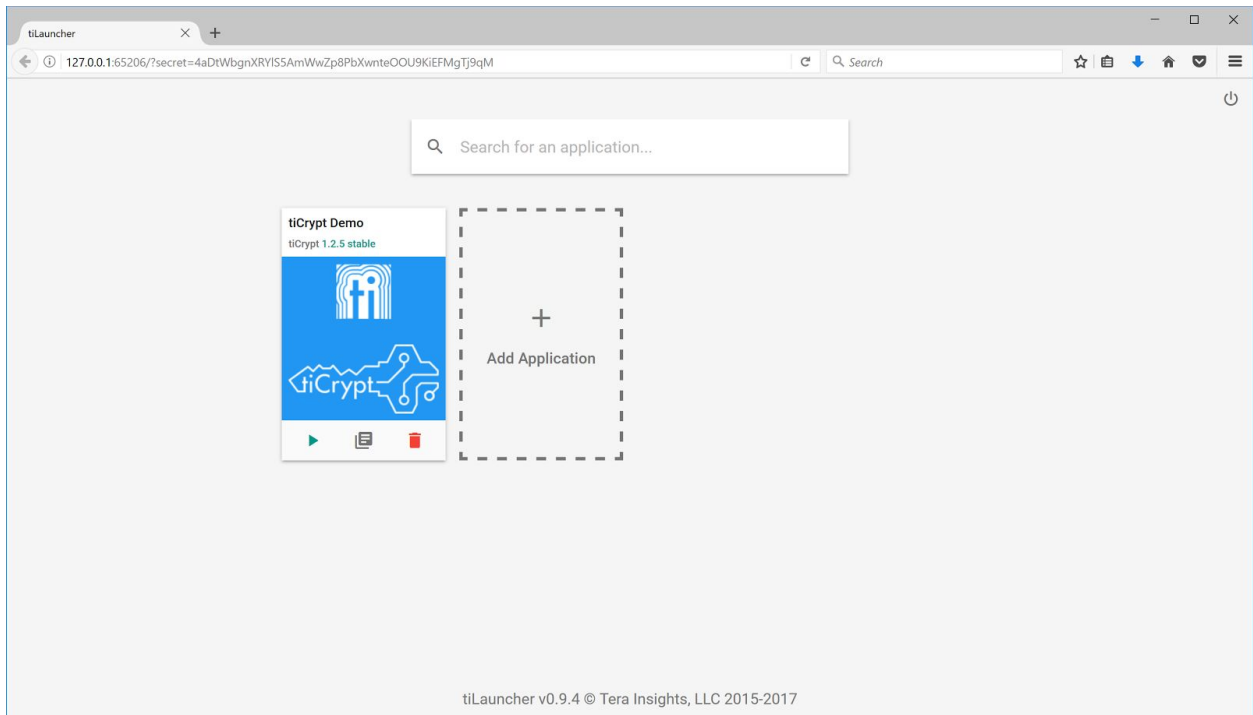

- 1) Download the tiLauncher and latest deployment file. *If this is for a demo account the files are located in the links provided in the email. If you are a UF user, please download into your ResVault folder.*
- 2) Run the tiLauncher program by double clicking the file.
- 3) Drag the deployment file into the application or click "+" to add the deployment file (.dep).

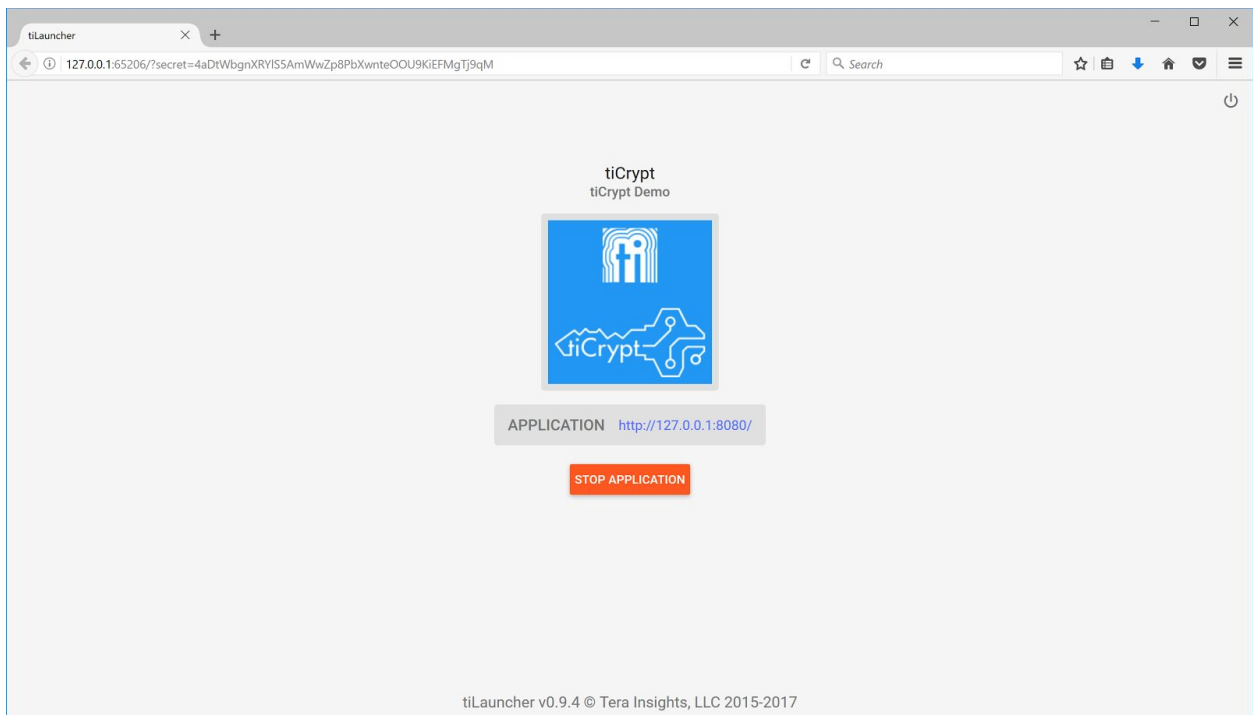

4) The tiLauncher will automatically check and prompt the user to download of the latest version. Click the UPDATE to get the latest version to tiCrypt

5) Upon updating to the latest version, the application will appear in the browser. Click the play button located on the bottom of the application to launch tiCrypt. tiCrypt is now running.

7) Access the login screen by selecting the APPLICATION button.

8) Drag or click LOAD KEY to add your key. *If this is your first time creating account click the REGISTER button and follow the registration steps. Once registered please email your system administrator to activate your account. If this is a demo account please email thomas@terainsights.com for activation.*
